A quirky research scientist is murdered in a remote village. A young woman named Candace has

strange dreams, and is the niece of the murdered scientist. In *The Karma Code* by Daniel Davidsohn, Candace must find out what happened to her beloved uncle in this startling and innovative novel. Candace brings on an investigator to help her figure out the solution to this quagmire. Enter Harry Walker, a well paid investigator from Boston who gets in over his head when it comes to protecting Candace and solving the mystery of the murder. In Finland, they are embroiled in a complex series of events from car chases to intense violence. With an aggressive yet thoughtful tone, Davidsohn challenges the reader beyond the scope of normal consciousness to experience and think about the concepts of karma, reincarnation, and pre-destiny. A heady mix to be sure, but the story works well on all of those levels, keeping the reader actively engaged until the end of this intriguing novel.

There are many mystery novels these days, kind of feels like a hyper production. That's ok with me because I always enjoy a good crime story, and this is one of them. This novel has everything you would expect from a modern day mystery novel – action, violence, fast pacing, interesting main detective, scary bad guys, it even has a few supernatural and spiritual elements sprinkled through the plot. The trouble begins when a scientist is murdered in Finland and his niece also is under threat, so our detective Harry Walker steps in. I like the setting, there are multiple countries included, but the atmosphere of Finland is most captivating to me. With Scandinavian setting and with the name of the detective, Harry, this novel reminded me a little of Jo Nesbo novels about Harry Hole. Maybe that was a deliberate nod from the author, who knows. Anyway, I enjoyed this book, writing style makes it a real joy to read, characters are good, plot is interesting, everything works for me. Recommended.

Author Daniel Davidsohn's interest in the creative arts led him to direct experimental short films and write several screenplays. One of these, *CAFÉ*, was well received and won the hollywoodscript.com contest in 2005. He is the author of several novels, including *FROM THE NILE TO THE EUPHRATES* (a Portuguese Edition in 2009), *MARE CRISIUM* (a Portuguese Edition in 2015), *A HIGHER POWER* (2016) and his current *THE KARMA CODE*. Daniel's writing style is colorful to the point of exotic – his words dance across the pages heightening the suspense and intrigue while always maintaining the focus of his story. For example, he opens this book with the following –  
Juujuu, Finland - Clifford Bouvier looked like an old limping horse bleeding from both nostrils. He ran as fast and awkwardly as a wounded seventy-year-old could, struggling with each step as he sunk to his knees in the snow. He kept looking back, panting. There

was a plain of white between him and the small village, and by now, he had to slow down his frantic sprint. In Juujärvi, a small village located in the Arctic Circle of northern Finland, life wasn't easy. The landscape was breathtaking, but if someone needed a hospital, the nearest one was fifty miles away. There were no schools, no malls, nothing. Only a few dozen people or so insisted on living there. Sure, they could hunt elk and eat it. Enjoy a cup of coffee and the local cake. Though it was a dying rural village, Clifford Bouvier had rented a small house there after leaving Chicago years ago in search of the perfect place to carry on his research undisturbed. And so the scene opens to introduce the fine story as the synopsis outlines "After a controversial American researcher is murdered in a remote Finnish village, Boston investigator Harry Walker receives a call from Candice--the victim's grieving niece. Determined to uncover her uncle's murderer, Candice finds herself in need of protection from the same forces that led to her uncle's demise. In a fight for survival through Finland, Scotland, and the United States, Harry and Candice face the greed of investors and rogue agents, who all want to get their hands on what is being called the Karma Code, an experiment potentially capable of accessing a surviving consciousness and predicting a person's fate. Unless Harry and Candice can find someone to trust amid the treachery around them, they--and the Code--are in danger of disappearing for good.' Strong promising work from a man who sculpts his mysteries well. Grady Harp, June 17

The Karma Code unfolds in fast-paced style. When an American research scientist is murdered in a remote Finnish village, his distraught niece is determined to bring those responsible to justice. She calls on Boston private investigator Harry Walker, and together the two of them set off for Scandinavia. However, it quickly becomes apparent that Candice and Harry have a target on their backs. What follows from this setup is a race for survival across Finland, Scotland and the U.S. Everyone has the same objective - to seize the murdered researcher's controversial experiment, known as the Karma Code, which has the power to access a surviving human consciousness and predict an individual's fate. I fairly enjoyed reading this novel.

The Karma Code starts with a powerful hook "the murder of a researcher whose dying words are so mysterious. The central theme about this book is really about tapping into what is believed to be the possibility of human souls to re-incarnate themselves and how to harness that knowledge to make powerful decisions for the future. Of course various government agencies recognize the potential of this ability and this is where The Karma Code gives you a glimmer of how good or bad tapping into this potential could be for individuals and for the world at large. I thought The Karma

Code could maybe delve a light more into the "contacting" of the lost souls to spice things up. The absence of such does not make the story any less interesting because there is danger, an underground movement to take over the world and a hint of love. These keep the Karma Code on a very interesting level and gives you a lot of food for thought. The Karma Code is different while maybe touching on something that is almost near to reality?
