Simon Basher is the creator and illustrator of The Periodic Table, Physics, Biology, and Astronomy. His characters bridge the gap between edgy Manga and the cuteness of Hello, Kitty! Dan Green wrote Basher's Physics, Biology, Astronomy and Rocks and Minerals. He studied Geology at Cambridge University. Artist and designer Simon Basher has fun playing in the world of contemporary character design. Inspired by a love of simple line work and a rich colour palette, his characters fill the gap between edgy Manga and the cuteness of Hello Kitty!

My 8 year old has decided that he is going to be a technology teacher by age 17. While I'm not sure that this book will be his only resource, it's given him an excellent jumping off place. The illustrations are engaging and the concepts connected to each character are easy to understand while still giving information that relevant to older students and even adults.

Every child I know - elementary and above - enjoys these books. Well-done, informative, and funny.

All of the books in this series are outstanding. They are spectacular in design and teach highly complex concepts to very young children. My daughter was naming her favorite elements from the periodic table at 4 years old because she was so intrigued with the way the information is presented. These books are also excellent in that you can introduce the information to a young child and the child can also use these books as reminders and reference guides in later years. Additionally, they come with informative posters that are constant reminders of the facts.

Perfect for young minds to grasp what makes technology do what it does. I love the way the information is categorized and illustrated. It's a good way to hook young learners and get them more excited about understanding the nuts and bolts of something they are already into (what kid doesn't like technology, right?).

Learning about technology never gets old to me. And this book walks the reader to the processes and inventions in use today.

This series of books is amazing! Science based stuff kids can relate to. One page explanations on each topic. I'm learning too!

Great gift for a little person

We have them all and he loves them all. Started buying when he was 7. If you have a science lover go for it.
