Received the book on time, new with the online passcode. did a great job. As far as a textbook, hmmm. I relied on other resources and eventually discovered Laerd.com, The best decision ever in spending \$5 to help understand what the authors could not always explain.

price was way better than buying at the book store at school

It is what it is suppose to be

This book is really written for the working nurse who is coming back to get an MSN or DNP. Very easy to read with real world examples that help you understand the principles. Very little math!
