Carlene Harrison, EdD, CMA (AAMA) Carlene Harrison is Dean of the School of Allied Health at Hodges University and is also Program Director for the Master of Health Services Administration and Graduate Certificate in Health Informatics. She has been a member of the faculty at Hodges University since 1992, but came on board full time in 2000, serving first as Chair of the Medical Assisting Program. As Dean of the School of Allied Health, she has overall responsibility for the following degree programs: Health Services Administration, Biomedical Sciences, Medical

Assisting, Health Information Management, and Physical Therapist Assistant. Her doctorate is from Argosy University. Her dissertation research looked at improvement in critical thinking in adult learners. Before becoming a full-time educator, Dr. Harrison worked for over 20 years in the healthcare field as an administrator. Employed mostly in the outpatient setting, she has worked in the for-profit, not-for-profit, and public health sectors. Karen Judson, BS Karen Judson taught biology laboratories at Black Hills University in Spearfish, South Dakota; high school sciences in Idaho; and grades one and three in Washington state. She is also a former laboratory and X-ray technician and completed two years of nurse's training while completing a degree in biology. Judson has worked as a science writer since 1983. Her book for teens, *Sports & Money: It's a Sell Out*, made the New York City Public Library's list of best books for teens in 1995. Her book for teens, *Genetic Engineering*, was chosen by the National Science Teachers' Association as one of the best science books for children in 2001 and was featured on the NSTA Web site.

Worst textbook in all of my undergraduate studies. Authors assert that Jean Piaget is a value theorist but the truth is Jean Piaget is a cognitive theorist in child development. They apply his cognitive theory to value theory, which is more indicative of Lawrence Kohlberg and they fail to mention Gilligan. The book is riddled with misinformation. Authors assert that Doctors of Osteopathy are focused on the musculoskeletal system, this would be the chiropractor not the D.O. In fact the D.O. was a medical reform movement because treatments killed people more than the cause and so the founder A.T. Still establishes the four tenets of osteopathy, which does not focus on musculoskeletal system. This is a health care law textbook but they fail to mention how healthcare professionals are licensed, they only focus on physician licensing, nothing about PA, nurses or dietitians. This should be renamed a medical law book. I have had a medical ethics class and this textbook mentions ethics that I have never even heard of as a healthcare profession. The authors also assert that medical schools require a four year degree while many do not. The reader will have to unlearn their incorrect facts and misinformation to later learn it the correct way.

I was going to rate it four stars but this book does not come with a code. I have to buy it separate. Descriptions did not state either.

Exactly what I needed! \$100 cheaper from the book store if not more. Was the exact book I was looking for and the rental process was also very easy.

The information was fine, but the copy I received had pages falling out.

Awesome!!! Came on Sunday instead of today (Monday). Book looks new. I save so much money on this book!

Book came on time for class!! A+ Great condition too! Thanks
