Customer Reviews

Explanations are confusing. The Kaplan series is much better.

Found a typo on Pg 26, in the examples portion of the section explaining what integrated reasoning test section will be like. So before I've even got to the part where I review and practice math I have lost faith in this book. The type in question is the second T/F statement in the first IR example on PG 26. The statement to be evaluated "The total 'number of deliveries..." and the solution for this statement reads "The total 'number of items delivered'" which in this context represents a completely different subject of questioning! Do not buy this book guys McGraw Hill does not really care about helping us review for the GMAT based on this representation of their efforts in 'test review' publications. I found this typo 20 mins after the book was dropped off, was eager to study and review now not touching this book again as im afraid it will send me backwards in my study efforts, especially if I spend all my time finding and worrying about their errors!!

Poor explanation of concepts when compared to manhattan's Questions are way too easy, and practice tests are not representative of GMAT at all. Some mistakes, and ambiguity.

Please buy this book only if you forgot to attend a primary school. Manhattan's math practice book is far better.
